

The Bermuda Greens website was established in March, 2017, partnering with MSWebservices to design, build and manage the technology. The purpose of the website is to provide a means for disseminating information of importance and general interest to owners and residents regarding management of the association, social events and activities. This is done keeping in mind prospective buyers to the community who may want to explore what we are all about. It has grown to be the primary source of the most up to date information for residents of Bermuda Greens.

The website has undergone a revision in 2024 to improve navigation and content in a more contemporary design. A committee has been established to monitor and update the content and ensure the website stays in compliance with Florida statutes. This committee also oversees the delivery of email communications to the community.

While we are not a technical group, we embrace technology as a tool to support the Board, Management, Committees and Clubs communicate with the Bermuda Greens community. We invite creative people, with an eye for detail and any experience in Marketing Communications they can share.
